

kACARS – Making a Charter Flight

We will begin with the sim loaded and aircraft selected and properly placed with the Parking Brake set at the departure airport. Do your fuel calculations (flight planner) and fuel your aircraft for the trip.

Counterclockwise Around kACARS

- Connect kACARS to the VA server (Log In)
- Connect kACARS to your sim
- Checkmark 'Charter Flight'
- Click 'Get Aircraft'
- In the Select Aircraft area, select the tail number of the aircraft that you will be flying. This is done by clicking the tail number (registration no) that you want.
- Click the 'Load' button

Now, you must manually input the rest of the kACARS required fields.

- Flight Number - use your FNB PilotID no.
- Departure ICAO
- Arrival ICAO
- Flight Level - in thousands of feet
- Click 'Start Flight' - any errors or omissions will be identified.
– fix them

You can now carry on and complete your flight.

When at destination, taxi to parking, set parking brake.

Click 'Stop Flight',

Click 'File PIREP'.

You have now completed this flight.
